Scales

16. **Index of Self-Esteem (ISE)** – single scale score (higher scores mean higher self-esteem)
The ISE is a 25-item scale designed to measure the degree, severity or magnitude of problem with self-esteem, an evaluative component of self-concept.

17-18. **Affective Balance Scale (ABS)** – Positive Affect (higher scores mean higher positive affect) and Negative Affect subscales (higher scores mean higher negative affect)
The ABS is is a 10-item instrument designed to measure psychological well-being, especially mood state. It has two subscales positive affect and negative affect.

19-21. **Compulsiveness Inventory (CI)** – Indecision and Double-Checking, Order and Regularity, and Detail and Perfection subscales (higher scores mean greater compulsiveness for each subscale)
The CI is an 11-item scale designed to measure behaviors that are common in the “normal” population(non-pathological compulsiveness).

22. **Obsessive-Compulsive Scale (OSC)** – single scale score (higher scores mean greater compulsiveness)
The OSC is a 20-item instrument that measures the general tendency toward obsessive thoughts and compulsive behaviors.

23. **Boredom Proneness (BP)** – single scale score (higher scores mean greater proneness to boredom)
The BP is a 28-item instrument desitned to measure the tendency or predisposition to boredom.

24-27. **Automatic Thoughts Questionnaire (ATQ)** – Personal Adjustment and Desire for Change, Negative Self-concepts, Low Self-Esteem, and Helplessness subscales (higher scores mean more negative thoughts)
The ATQ is a 30-item instrument that measures the frequency of automatic negative statements about the self.

28. **Authority Behavior Inventory (ABI)** – single scale score (higher scores mean greater acceptance of authority)
The ABI is a 24-item instrument that measures the acceptance of authority
Self Description Questionnaire

Method

Participants
-university undergraduate students from UNL (traditional and nontraditional)
-friends and associates of students enrolled in an introductory stats course
-sample size (N)
-self identification (% each category)
-average age
-ethnic breakdown (% each category)
-students also completed one survey each
-collected from other students in classes, dorm, frat/sorority house, apartment, etc.- wherever they were at the time

Materials
-completed a self-report questionnaire
-completed it in a natural setting
-demographic questions (age, gender, race, etc.)
-description of ABS, CI, OCS, etc..... however, you will only describe the surveys you used in your analyses. But mention that participants did complete a set of surveys but only some were included in the analyses.

Procedure
-investigators completed one survey themselves first
-sought out other undergraduate students (regardless of age) to complete 5 surveys for each researcher
-scored and collated surveys
-entered into a larger database that consisted of data from multiple sections
-formulated hypotheses and completed appropriate analyses
